# DiseaseMimic AI | Doctor-ready summary

Prepared 26 Oct 2026, 11:41 pm IST | Unvalidated demonstration

SYNTHETIC DEMONSTRATION: Neurological symptoms

This report organizes patient-reported information and exploratory phenotype associations. It does not establish a diagnosis and should be reviewed by a qualified healthcare professional.

The reference data focuses heavily on rare diseases. Common explanations for symptoms may be missing or inadequately represented. These are exploratory feature matches, not likely diagnoses.

## Reported information — not independently verified

Main concern: Synthetic concern for demonstration

Timeline: Several months ago; Gradual; Coming and going

Age range: Not reported

Family history: Synthetic family history: not known

Prior diagnoses: No prior diagnosis reported in this synthetic example

Examination: Not reported

Laboratory / imaging: Not reported

Reported present: Muscle weakness (HP:0001324); Gait disturbance (HP:0001288); Ataxia (HP:0001251); Muscle stiffness (HP:0003552); Tremor (HP:0001337)

Reported absent: None recorded

Unknown: None recorded

Not assessed: None recorded

## Follow-up questions and answers

No follow-up answers recorded.

## Exploratory reference comparisons — not likely diagnoses

### WARS2-related combined oxidative phosphorylation defect (ORPHA:572798)

Matching reported features: Muscle weakness; Gait disturbance; Ataxia; Tremor

Reported features without a documented positive association: Muscle stiffness. Missing annotation does not establish absence.

Additional reference-only features (not patient findings): Autosomal recessive inheritance; High palate; Thin upper lip vermilion; Hypertelorism; Long philtrum

### Neuronal intranuclear inclusion disease (ORPHA:2289)

Matching reported features: Muscle weakness; Gait disturbance; Ataxia; Tremor

Reported features without a documented positive association: Muscle stiffness. Missing annotation does not establish absence.

Additional reference-only features (not patient findings): Autosomal dominant inheritance; Urinary incontinence; Abnormality of the pharynx; Ophthalmoplegia; Miosis

### Motor incoordination-myopathy-respiratory insufficiency-progressive cerebellar atrophy syndrome (ORPHA:715623)

Matching reported features: Muscle weakness; Gait disturbance; Ataxia; Tremor

Reported features without a documented positive association: Muscle stiffness. Missing annotation does not establish absence.

Additional reference-only features (not patient findings): Autosomal recessive inheritance; Microcephaly; Hearing impairment; Sensorineural hearing impairment; Strabismus

## Clinical review and sources

Discuss the actual symptoms, their timeline, history and any documented examination or investigation findings with a qualified clinician. No test or treatment is prescribed by this report. Safety rules remain unreviewed; this demo cannot exclude emergencies.

Sources: downloaded Human Phenotype Ontology and Orphadata disease–phenotype associations; real local CUDA model response. HPO: https://hpo.jax.org/ | Orphadata: https://www.orphadata.com/

Only supported HPO observations were submitted to the ranking model. Timeline, history and other context were not model inputs.

This report organizes patient-reported information and exploratory phenotype associations. It does not establish a diagnosis and should be reviewed by a qualified healthcare professional.
